- ▶ **Intranet & Onsite Search**
- ▶ **Newsletter Management**
- ▶ **Knowledge Maps**
- ▶ **Semantic Linking for Media Portals**
- ▶ **Expert Identification**
- ▶ **E-Discovery**
- ▶ **Intelligent Shop Search**

Search+

The high-quality add-on for your SharePoint search

Search+ is a search enhancement (SharePoint Solution) certified by Microsoft for users of Microsoft Office SharePoint Server 2007, Search Server 2008 and Search Server Express. Search+ highly improves the quality of your search process. There are two kinds of software packages available which are based on each other:

- ▶ **Search+ 2.0 Base Suite**
- ▶ **Search+ 2.0 Ultimate Suite**

Search+ 2.0 solely uses the SharePoint index, there is no need to install another search engine. Furthermore, it is not required to maintain additional data or to administrate another search index. The new Search+ search features are built modularly and can be quickly installed and intuitively used at once without any user training.

Guided search and intelligent navigation:

The Search+ **IF ConteXtor Suite** includes intelligent and easy-to-use tools which targetedly guide the user to the hits relevant to him. Filters based on meta data (e.g. author, date, file type, or data source) enable the user to navigate through the contents.

The semantic search (**IF OntologyNet**) uses text mining methods to fully automatically extract additional meta data (e.g. top phrases) without causing any manual efforts for the user.

This way, Search+ enables the user to intuitively limit also large hit lists just by mouse-click and to quickly find the relevant information. This semantic search detects terms which strongly correlate with the entered search query and visualizes them in a user-friendly way.

Furthermore, Search+ supports the user in entering his search query:

The Search+ synonym thesaurus (**IF Synonym-Net**) contains 45,000 German and 65,000 English synonym groups for general language which enable the user to expand his search query by mouse-click.

For optimizing your SharePoint search we offer you the following special functions:

- ▶ **PowerSearch:**
Advanced search for refining the search query
- ▶ **MetadataSearch:**
Visualization of selected file properties (managed properties) for narrowing the search query
- ▶ **ScopeSearch:**
Quick filtering based on content areas

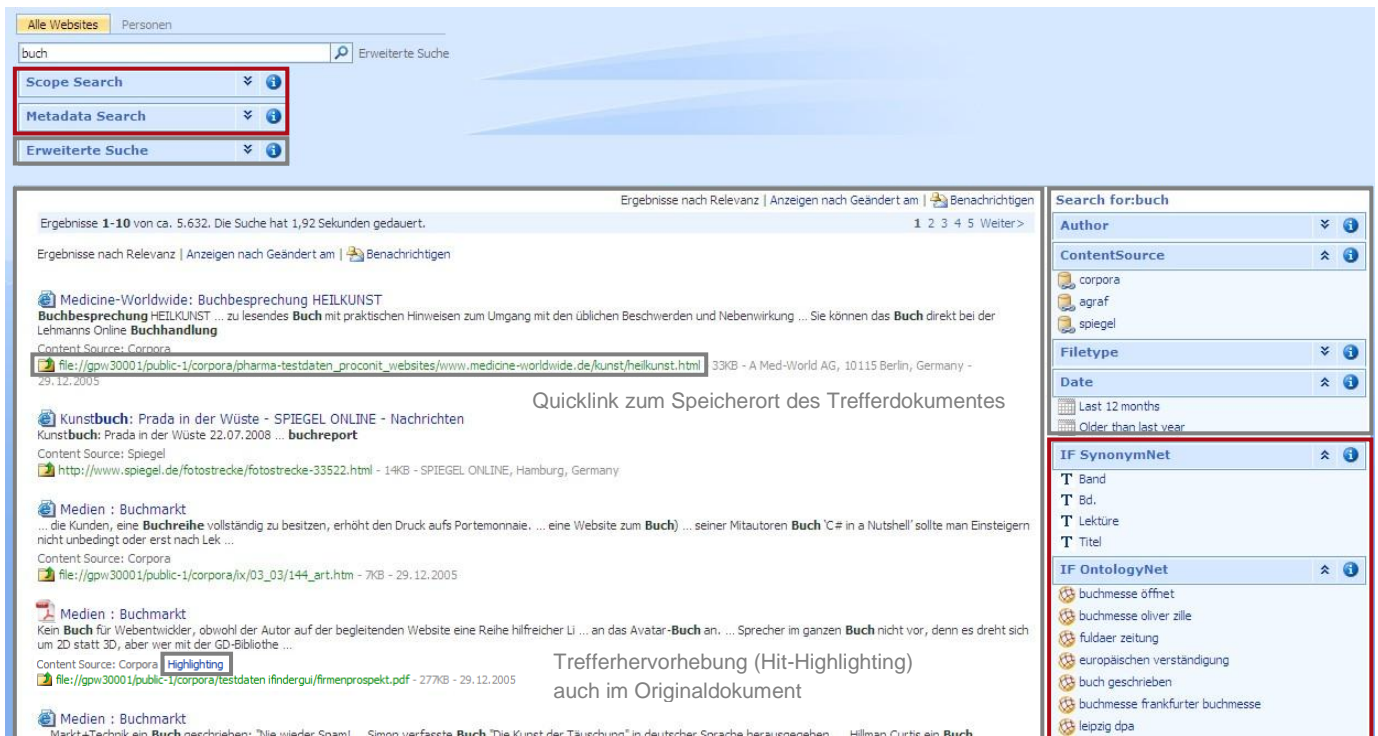

Search+

The high-quality add-on for your SharePoint search

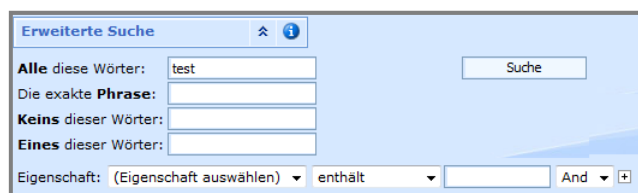

The user-friendly search surface makes it possible to intuitively and quickly refine the search:

Functionalities Search+ Base Suite (advanced search, hit highlighting, quick link, IF Standard-ConteXtors)

Functionalities Search+ Ultimate Suite (IF SynonymNet, IF OntologyNet, ScopeSearch, MetadataSearch)

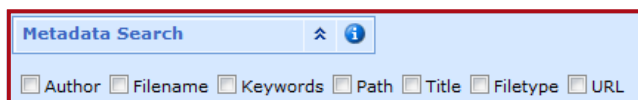

Advanced Search (Base Suite)

The advanced search offers the possibility to search for one single or a couple of terms or meta data just by a few mouse-clicks.

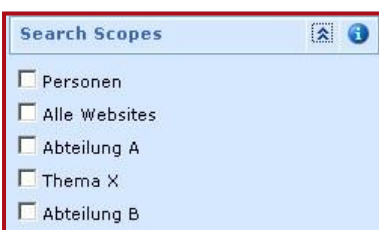

Properties like „Date“ or „Filetype“ can be extended via the “plus sign” and the operator field AND, OR, NOT.

Metadata Search (Ultimate Suite)

When activating one of the check boxes, this selection will be transferred to the standard search and limits the search query to the selected meta data (e.g. author or file type of the searched document).

Search Scopes (Ultimate Suite)

Scopes are content areas generated by an administrator. One scope can include several content sources, e.g. patents stored on a central file share and patent information stored in another system can be summarized to one content area (e.g. “patent system”).

Via opening the Search Scope WebParts and clicking the appropriate check box, the search can be individually limited to the selected scope. When selecting more than one check box, it is also possible to search several scopes contemporarily.

Search+

The high-quality add-on for your SharePoint search

Search+ 2.0 features at a glance:

- ▶ Extended Boolean search
- ▶ Wildcard search
- ▶ Hit highlighting in the original PDF or MS Office document
- ▶ Quick link pointing to the original storage space of the hit document
- ▶ Opening of the hit document in a new window
- ▶ **IF Standard ConteXtors** for narrowing the hit set by selecting meta data like author, data source, file type
- ▶ **IF Date ConteXtor** for limitation to a defined time frame (e.g. "today")
- ▶ **IF SynonymNet ConteXtor** in German and English for enriching the search term with synonyms
- ▶ **IF OntologyNet ConteXtor** for calculating a cloud of terms whose content is similar to the search query, semantic-associative search

Some more reasons why you should opt for Search+ ...

The installation of Search+ means very low administrative efforts – your search is installed within a few minutes and can be used at once.

All new features can be intuitively used without

any user training and produce immediate cost savings!

Furthermore, the Search+ user interface can be easily and quickly adapted to company-specific requirements (e.g. if a renaming of the filters is required) via using resource files.

Our services for you

You are interested in knowledge maps with SharePoint, Named Entity Recognition or topic-based search?

Just ask us for our specialist solutions. We are experts for information retrieval in unstructured and structured corporate data and provide software products, solutions and consulting for enterprise search, information access & text mining.

Contact us – we would like to support you in finding your individual Search+ solution!
